

TA seminar

Outcome on all three dice is 6 if.

1. Outcome on one is 6.

$$P(A/B) = \frac{P(A \cap B)}{P(B)}$$

$$\Rightarrow P(B) = \frac{1}{6}$$

$$P(A/B) = \frac{\frac{1}{6} \times \frac{1}{6} \times \frac{1}{6}}{\frac{1}{6}} = \frac{1}{36}$$

---

2.

1.  $\overline{26} \times \overline{26} \times \overline{26}$

2.  $26 \times 26 + 26 \times 26 \times 26$

- 3.

---

3

$\overline{\cdot} \quad \overline{\cdot} \quad \overline{\cdot} \quad \overline{\cdot}$

$n=4$

exactly one cell

remains empty  
0 0 0 0 1

2019 midterm :

52 cards  
↓  
13 selected

2 pairs "ace and king" from the same

Q. Suits → 4 suits

4 pairs are possible.

Rest: 13 - 2

4/

$$\frac{k=1}{13-1}$$

$$4 \times 2 = 8. \quad \frac{k! (52 - 2k)!}{\binom{52}{13}}$$

~~8 Sep~~

$$\frac{\lambda^k e^{-\lambda}}{k!} \quad (\lambda > 0)$$

Not resolved = P

Practice

first		second urn
$N_1$	→ white marbles	$N_2$
$M_1$	→ black marbles	$M$

Can 1 → white marbles  
from urn 1

$$\frac{N_1}{N_1 + M_1}$$

Probability from  
obtaining white from second urn

$$\frac{N_2 + 1}{N_2 + M + 1} \left( \frac{N_1}{N_1 + M_1} \right)$$

4 players.  $\rightarrow$  draw 4 cards each  
52 cards

Probability that after the swap, all 4  
players have all their 4 cards from  
different suits.  $\rightarrow (13, 13, 13, 13)$

Swaps  $\rightarrow$  No swap  $\rightarrow$  Already have 4 different suits.  
1 swap. (2 players swap) or 3 people have it.  
2 swaps. (player 1 swap  $\rightarrow$  player 2.  
player 3 swap  $\rightarrow$  player 4)

~~1~~  $\Rightarrow$  Combinations of  
how this is done

but max. 2 swaps.
